KaneGIS4 Web Application

About

This PublicGIS map viewer was created by GIS-Technologies a division of the Information Technologies department as a replacement for the original Web Application using the new ArcGIS Javascript API 4.x library.

This application works best with the latest version of **Chrome**, **FireFox**, **Safari** or **Microsoft Edge**. Due to the use of new technology the older Microsoft IE browsers should no longer be used with this application.

In order to handle an increase in audience during peak load times we have extended our computing power and data storage capacity by moving the Kane geodata to our ArcGIS Online Secure Cloud without impacting our own existing systems.
